STATISTICS & DATA ANALYTICS GRADUATE

Statistics graduate from the University of Vienna with hands-on experience in risk management at Generali. I build statistical models, analyse time series and turn results into clear, reproducible reports in R. Looking for an entry-level role in data analysis, data science or risk analytics.

EXPERIENCE

Risk Management Intern
07/2024 · 1 month

Generali Versicherung AG · Vienna

- Cross-checked the credit ratings of all financial instruments and issuers across the portfolios of Generali, BAWAG and Europäische Versicherung
- Automated the Risk Control Committee presentations for Strategic Asset Allocation using think-cell
- Reworked layout and print setup of the Asset Risk Reports for all three entities
- Offered a follow-up internship by the risk management department

Waiter & Bartender
2020 - 2022

Treevent GmbH · Event catering

- Service and customer care at large events; regularly lead bartender at the main bar
- Trained and onboarded new staff and supported event logistics

EDUCATION

BSc Statistics and Data Analytics
2023 - 2026

University of Vienna · All exams completed, certificate pending

BACHELOR'S THESIS

Estimating Expected Goals: Logistic Regression vs. Random Forest

xG models on 3,067 World Cup shots (StatsBomb data), trained on 2018 and tested on 2022. The logistic regression reached an out-of-sample **AUC of 0.80**, close to the industry benchmark (0.81), and outperformed the random forest.

Key courses: Linear Models I & II · Multivariate Statistics · Computational Statistics · Time Series Analysis · Mathematical Statistics · Applied Econometrics · Big Data & Uncertainty · Financial and Actuarial Mathematics

Matura
2019

AHS Heustadelgasse · Vienna

Realgymnasium with Descriptive Geometry

PROJECTS

Austrian Elections 2019-2024. R pipeline that reads and validates official results from municipal to national level, with my own D'Hondt implementation, a coalition search and a Monte Carlo simulation of polling uncertainty.

Croatian GDP. Broken trends, spectral tests and ARFIMA models show that the 2008 crisis cut average quarterly growth from 0.88% to 0.13% for a decade.

Gold Returns. 26 years of daily returns tested for predictable patterns: no exploitable linear structure, but clear volatility clustering.
